

## WHAT DO ALUMNI UNISG DO?

### REPORT 2017

#### STATISTICS ON THE EMPLOYMENT STATUS OF 2015 GRADUATES

#### Methodological premises

Every year, the UNISG Career Office carries out a survey that has the aim of exploring and understanding the impact of the study programmes on the employment status of our Alumni. The creation of the data-collection tool (anonymous questionnaire) and the processing of these data are entrusted to a Professor on contract of Psychometry at the University of Turin.

Graduates were interviewed after a period of 12 months from their graduation.

#### Representation of sample and response rate

The target population includes graduates from all the University degrees, in particular (response rate in brackets):

- Undergraduate degree (86%);
- Graduate degree (92%);
- Master programs:
  - Master in Food Culture and Communications (82%)
  - High Apprenticeship (96%)
  - Italian Wine Culture (69%)

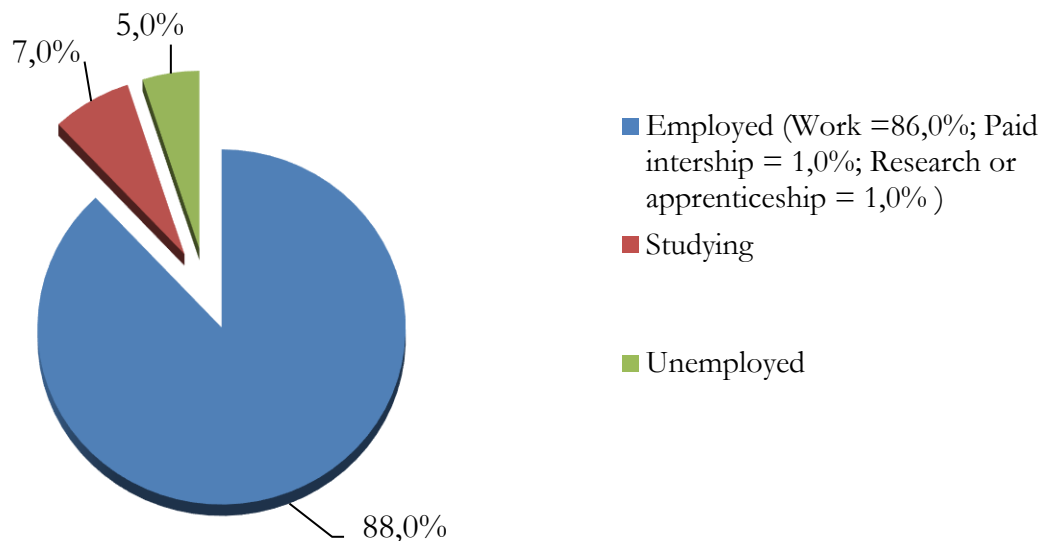

#### Employment status

86% of the interviewed is **working**, while 1% declares to be employed as an intern with participation benefits. Between the ones who have a paid employment, 1% is engaged in activities that grant a scholarship, or a research or apprenticeship allowance.

Those who have continued with **further studies** are 7% of the whole; at the time of the interview, 5% of graduates are **unemployed**, but 80% of them declares that they had an occupation during the first 12 months from the graduation.

Taking into consideration all the given answers, **the percentage of graduates who are engaged in working activities, internships or research activities (all with a salary) is 88% of the interviewed.**

*Chart 1- Employment rate*

It is also interesting to examine the average time from the graduation to the achievement of the employment status: the results of this analysis highlight that this objective is reached in 2.3 months.

## Type of contract

Taking into consideration the graduates who declare to be engaged in work activities, 29% declare to have an open-ended contract. In a percentage descendent order, we find then the employed with a fixed-term contract (25%) and the self-employed workers (11%).

Moreover, in the following table, it is possible to find the data regarding the remaining contract typologies, which include all the graduate population of the year 2015. With regards to the net monthly income of graduates who are working, this averages € 1.419,51.

Chart 2 – Type of contract

Open-ended contract	29%
Fixed-term contract	25%
Self-employment	11%
Apprenticeship contract	7%
Professional service contract	6%
Casual labour contract	4%
Work without contract	3%
Project contract	2%
Internship	2%
Reintegration contract	1%
On-call contract	1%

## Company business sector

The operational sector of the company in which the interviewed are employed is very varied.

16% of the interviewed is working for Ho.Re.Ca. sector companies or for Farms and artisanal producers (14%) and Specialty shop/Small retail food shop/E-commerce (14%). Other 13% found an employment in wine companies.

The remaining ones are distributed in other company typologies, which are illustrated in the following graphic:
